Dear font lover,

Thank you so much for buying my font !
Here is a quick tutorial on how to install it, so that you could access to the extra features such as ligatures
**and alternate glyphs.**

1 First, if you have installed a personal free version of the font on your system, uninstall and delete it, you don't
need it anymore.

2 If you're working with Adobe Illustrator, Indesign, or Photoshop CC 2015, you'll just need to install the OTF file. Go
to Text > Glyphs. In Photoshop CC2015 go to Type > Panels > Glyphs panel or Window > Glyphs. There you'll find
the complete set for you to play with.

The OpenType features allows you to create alternates glyphs for a natural script effect.
Just type a combination of letters to obtain a great result :

1

2

3
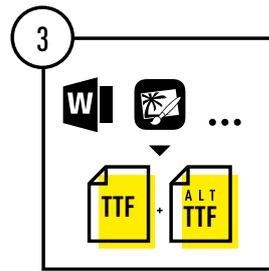

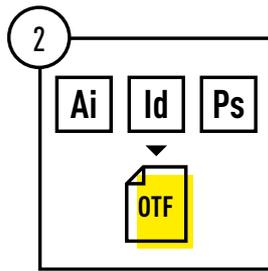

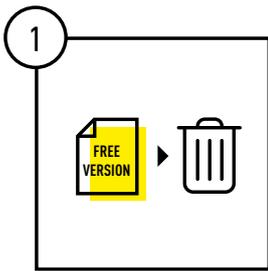

3 If you're using any other program such as Microsft Word, Publisher, Pages, Pixelmator, etc... you'll need to install both TTF files (font file + alternates file). Just write your text using « Beyond the Mountains », and pick up with «Beyond the Alternates» the alternate you want. To help, here is the glyph table :

TTF	ALT		TTF	ALT		TTF	ALT		TTF	ALT		TTF	ALT
B	> B		F	> f		u	> uu		t	> tt		6	> THE
b	> B		x	> ff		o	> oo		v	> th		7	> TO
C	> Ch		g	> gg		O	> o		T	> T		8	> FOR
d	> d		G	> g		p	> pp		/	> AT		9	> BUT
E	> E		h	> h		q	> q		0	> AND		W	>
e	> ee		i	> it		r	> rr		1	> WITH		X	>
w	> o		l	> ll		R	> r		2	> WHAT		Y	>
f	> ff		m	> mm		s	> ss		3	> IS		Z	>
u	> fi		M	> m		S	> s		4	> IT			

Oh, and never forget to restart any program. Sometimes, it helps !
Thanks again, and enjoy !
